GREAT EASTERN HOLDINGS

AI at Great Eastern: deep-dive evidence report

The evidence behind the executive pre-read: where AI is in use, what it has delivered, and how it is governed

PREPARED FOR	The leadership team, Great Eastern Holdings Limited
PREPARED BY	PLUMB Advisory
DATE	October 2026
STATUS	**Discussion draft**

Prepared from Great Eastern Holdings' Annual Report 2025, as at its publication in March 2026. It has not been reviewed by Great Eastern. Quotations are reproduced word for word; page references are to the page numbers printed in the annual report.

CONTENTS

Contents

1	Summary	3
2	Where AI is in use	4
3	Reported outcomes	6
4	Where the value sits	7
5	AI governance	9
6	Hypotheses and how an assessment would test them	11
A	Appendix A: Sources	13
B	Appendix B: Method	14
C	Appendix C: Open items	15

Every finding rests only on statements and tables checked against Great Eastern's Annual Report 2025. Our own summary sentences are marked by their page references; the company's words appear as quotations.

SECTION 1

Summary

Great Eastern's AI delivers speed, but no benefit is yet reported in dollars[1]

1 AI is live from advice to claims, with complex underwriting still in testing

The annual report names eight uses of AI, from an advisory platform for financial advisers to automated medical claims and compliance monitoring. AI for complex underwriting cases is still being tested.[2]

2 Reported outcomes are speed, not yet dollars

In 2025, 75% of medical claims were settled same day, and the advisory platform targets ~75% less preparation time for financial advisers. 0 of 8 AI uses are reported with a dollar benefit, and neither figure is given with a baseline.[3]

3 10% better accident and health claims would add S$131m to a year's profit

On Great Eastern's own assumption sensitivities, accident and health claims 10% better than assumed add S$31.8 million (Singapore) and S$99.3 million (Malaysia) to a year's profit after tax. This is a sensitivity, not a forecast of AI benefit; contractual life benefits are excluded.[4]

4 AI has board oversight and dedicated leadership; the annual report does not set out the AI framework

Two named directors are paid for their data and AI work, and the Data & AI operating model was restructured in 2025 under a Managing Director, Group Data and AI. AI policy, an AI inventory and model risk management for AI are not covered in the annual report.[5]

The sections that follow set out the evidence behind each message. Section 6 turns it into three hypotheses that an assessment would test.

1. Annual Report 2025, pp. 12 and 38.
2. Annual Report 2025, pp. 6, 12 and 38.
3. Annual Report 2025, pp. 12 and 38.
4. Annual Report 2025, Note 30, pp. 186 and 187.
5. Annual Report 2025, pp. 39, 65, 71 and 78.

SECTION 2

Where AI is in use

AI is live from advice to claims, with complex underwriting still in testing

The annual report names eight uses of AI. Three are described in the Letter to Shareholders, one on the key-figures page, two in the review of the Singapore business and two in the review of the Malaysia business. (Annual Report 2025, pp. 6, 12, 38 and 41)

TABLE 1. USES OF AI NAMED IN THE ANNUAL REPORT 2025

STAGE	USE	STATUS	MARKET	PAGE
Advice and distribution	AI-enabled advisory platform for financial advisers	Deployed	Group	12
Underwriting	In-house analytics and AI for underwriting and medical claims	Sharpened	Group	6
Underwriting	AI solution for complex underwriting cases	Testing	Group	12
Onboarding	AI in customer segmentation, enabling instant approvals for existing lower-risk Great CareShield customers	Leveraged	Singapore	38
Claims	Proprietary platform that automates medical claims	Rolled out	Group	12
Claims	Optical character recognition of medical bills to identify potential wastage and abuse	Developed	Malaysia	41
Risk and conduct	Monitoring of transactions and sales patterns for compliance risks, including anti-money laundering	Continuously monitoring	Singapore	38
Risk and conduct	AI-driven model to help identify potential misconduct cases	Developed	Malaysia	41

Status is the company's own verb for each use. "Group" marks a use described without a market being named. Page numbers are those printed in the annual report.

In the company's words

> ADVICE AND DISTRIBUTION
>
> "In 2025, we deployed an AI-enabled advisory platform that aims to reduce preparation time for financial advisors by approximately 75%, enabling them to focus more on customer engagement and advice."
>
> Annual Report 2025, p. 12

UNDERWRITING AND MEDICAL CLAIMS (KEY-FIGURES PAGE)

"Sharpened in-house analytics and AI for underwriting and medical claims to enhance accuracy and consistency, empowering employees to drive continuous improvement through more agile workflows."

Annual Report 2025, p. 6

UNDERWRITING

"We are also testing an AI solution for complex underwriting cases to further improve automation and associated efficiency."

Annual Report 2025, p. 12

ONBOARDING

"We further leveraged AI in our customer segmentation process for our supplementary long-term care insurance plan, Great CareShield, to enable instant approvals for existing lower-risk customers."

Annual Report 2025, p. 38

CLAIMS

"We rolled out a proprietary AI-powered platform to automate medical claims, enhancing claim efficiency while improving customer experience."

Annual Report 2025, p. 12

CLAIMS, MALAYSIA

"As AI accelerates transformation across the insurance industry, we have developed an Optical Character Recognition solution that extracts and analyses data from medical bills to identify potential wastage and abuse within medical claims."

Annual Report 2025, p. 41

RISK AND CONDUCT

"Complementing these, our proprietary risk management AI solutions strengthen governance by continuously monitoring transactions and sales patterns to proactively detect compliance risks, including anti-money laundering and potential misconduct."

Annual Report 2025, p. 38

RISK AND CONDUCT, MALAYSIA

"We have also developed an AI-driven model to help identify potential misconduct cases, significantly reducing the manual effort and time required for investigations."

Annual Report 2025, p. 41

SECTION 3

Reported outcomes

Claims shows the clearest AI result; the adviser platform's benefit is still a target, and no use is reported in dollars

RESULT, 2025

75%

of medical claims settled same day in 2025

Described as one of the fastest among Singapore's health insurers, based on Ministry of Health service indicators.

Annual Report 2025, p. 38

TARGET

~75%

less preparation time for financial advisers, the aim of the AI-enabled advisory platform

No achieved figure is reported.

Annual Report 2025, p. 12

DOLLAR BENEFIT

0 of 8

AI uses reported with a dollar benefit

None of the eight uses in section 2 is reported with a financial value.

Search of the uses in Annual Report 2025, pp. 6, 12, 38 and 41

The two 75% figures are the same number but not the same kind of evidence. The claims figure is a result the company reports for 2025. The adviser figure is what a platform deployed in 2025 "aims to" achieve; the report gives no achieved value. (Annual Report 2025, pp. 12 and 38)

TABLE 2. WHAT IS REPORTED, AND WHAT IS NOT

	MEDICAL CLAIMS TURNAROUND	ADVISER PREPARATION TIME
Kind of figure	Achieved result	Target
Period	2025	Platform deployed in 2025; period of measurement not stated
Comparison offered	Among the fastest of Singapore's health insurers, on Ministry of Health service indicators	None
Baseline	Not stated	Not stated
Population measured	Medical claims; claim types and volumes not stated	Financial advisers; number of advisers not stated
Financial value	Not stated	Not stated

Source: Annual Report 2025, pp. 12 and 38.

Outcomes described without figures

The two Malaysia uses are reported with qualitative outcomes, and the medical-bill solution with an industry award. Neither carries a figure. (Annual Report 2025, p. 41)

MEDICAL-BILL RECOGNITION, MALAYSIA

"This capability has significantly strengthened our claims oversight and operational efficiency. The initiative was awarded the Best Claims Initiative in Malaysia at the Insurance Asia Awards 2025."

Annual Report 2025, p. 41

WHY IT MATTERS

Without a baseline or a dollar value, neither figure can be weighed against the cost of the next wave of AI. Section 4 uses Great Eastern's own numbers to show where that value could sit.

SECTION 4

Where the value sits

10% better accident and health claims would add S$131m to a year's profit

SINGAPORE

S$31.8m

one-year profit after tax, net of reinsurance

Annual Report 2025, Note 30, p. 186

MALAYSIA

S$99.3m

one-year profit after tax, net of reinsurance

Annual Report 2025, Note 30, p. 187

TOTAL

S$131m

one-year profit effect of 10% better accident and health claims

Annual Report 2025, Note 30, pp. 186 and 187

Great Eastern discloses how its profit would change if each of its main actuarial assumptions moved on its own. In scenario 4, accident and health claims are 10% lower than assumed. On the 2025 figures, one year's profit after tax would rise by S$31.8 million in Singapore and S$99.3 million in Malaysia, net of reinsurance: S$131.1 million in total. (Annual Report 2025, Note 30, pp. 186 and 187)

HOW TO READ THIS

This is Great Eastern's own assumption sensitivity, not a forecast of AI benefit. It shows the scale of profit that moves with accident and health claims experience, which is where claims AI acts. Contractual life benefits, such as maturities, death benefits and surrenders, are excluded: they are obligations to policyholders, not costs for AI to reduce.

TABLE 3. GREAT EASTERN'S ASSUMPTION SENSITIVITIES, 2025: IMPACT ON ONE YEAR'S PROFIT AFTER TAX, NET OF REINSURANCE

ASSUMPTION	CHANGE	SINGAPORE	MALAYSIA
1. Mortality and Morbidity	+ 10%	(102.1)	(58.6)
2. Mortality and Morbidity	– 10%	34.4	53.7
3. Accident and Health	+ 10%	(32.1)	(109.5)
4. Accident and Health	**– 10%**	**31.8**	**99.3**
5. Persistency	+ 25%	(21.2)	28.4
6. Persistency	– 25%	(8.5)	(26.6)
7. Renewal Expenses	+ 10%	(16.7)	(16.2)

S$ million; figures in brackets are reductions in profit. Each scenario changes one assumption, with all other variables held constant. Scenario 4, Singapore and Malaysia combined: S$131.1 million. Source: Annual Report 2025, Note 30, tables 30(B1) and 30(B2), pp. 186 and 187.

AI already works on accident and health claims. Medical claims are automated, and in Malaysia an optical character recognition solution checks medical bills for potential wastage and abuse. Three levers are open to test: claims leakage and fraud, medical cost management, and faster, cleaner adjudication. Section 6 states the value hypothesis in a form an assessment could confirm or reject. (Annual Report 2025, pp. 12 and 41)

SECTION 5

AI governance

AI has board oversight and dedicated leadership; the annual report does not set out the AI framework

TABLE 4. AI GOVERNANCE IN THE 2025 ANNUAL REPORT

ELEMENT	IN THE 2025 ANNUAL REPORT	WHERE
Board-level AI oversight	Described	Directors' fees and board competencies, pp. 71 and 78
Data & AI leadership and operating model	Described	Operating model restructured in 2025, p. 39; Managing Director, Group Data and AI, p. 65
AI policy or principles	Not covered in the report	Search of the full report; see below
AI inventory and risk tiers	Not covered in the report	Search of the full report; see below
Model risk management for AI	Not covered in the report	Search of the full report; see below

Source: Annual Report 2025, pp. 39, 65, 71 and 78.

What the annual report describes

AI reaches the board in two places: two named directors are to receive fees for their contributions to IT infrastructure, data and AI initiatives, and the board's collective competencies include artificial intelligence. (Annual Report 2025, pp. 71 and 78)

> DIRECTORS' FEES, NOTE 4 TO THE REMUNERATION TABLE
>
> "(4) Dr Chong Yoke Sin and Mr Lee Fook Sun will each receive a fixed amount of $20,000 and $5,699 respectively for their contributions in respect of Great Eastern Group's information technology infrastructure, data and artificial intelligence initiatives for FY2025."
>
> Annual Report 2025, p. 78

> BOARD COMPETENCIES
>
> "Collectively, they provide the necessary business acumen, knowledge, capabilities and core competencies to the Company and the Group, including … regulatory requirements, risk management, law, cyber risk, ESG and sustainability, taxation and artificial intelligence."
>
> Annual Report 2025, p. 71

AI also has dedicated leadership. The Data & AI operating model was restructured in 2025, and a Managing Director, Group Data and Artificial Intelligence, led the function. The report records that she was expected to join OCBC as Head of the Group Data Office in March 2026, with a successor to be named. (Annual Report 2025, pp. 39 and 65)

> **DATA AND AI OPERATING MODEL**
>
> "In 2025, we restructured our Data & AI operating model to accelerate transformation."
>
> Annual Report 2025, p. 39

> **LEADERSHIP CHANGES**
>
> "Ms Zhao Jingyuan (Managing Director, Group Data and Artificial Intelligence) is expected to join Oversea-Chinese Banking Corporation Limited ("OCBC") as the Head of the Group Data Office in March 2026. … The successors to Ms Zhao Jingyuan and Mr Jimmy Tong will be named in due course."
>
> Annual Report 2025, p. 65

Where the report pairs AI with governance, the mechanisms it cites are a Quality Assurance Scorecard, introduced to strengthen accountability and service quality, and the Cyber Trust Mark. (Annual Report 2025, p. 12)

> **LETTER TO SHAREHOLDERS**
>
> "As we expanded the use of digital and AI capabilities, we did so with discipline and robust governance. In 2025, we introduced a Quality Assurance Scorecard to strengthen accountability and service quality and became the first insurer in the industry to attain the Cyber Trust Mark in Singapore, reflecting the strength of our cyber governance and commitment to safeguarding customer trust."
>
> Annual Report 2025, p. 12

What the annual report does not cover

An AI policy or principles, an inventory of AI systems with risk tiers, and model risk management for AI are not covered in the annual report. This describes public disclosure only, not an assessment of practice; such frameworks may exist internally or at OCBC group level, which we did not review.

HOW WE SEARCHED

We searched the full text of all 1–244 pages of the Annual Report 2025 (counted as pages of the PDF file) for 17 terms that usually accompany a description of how AI itself is governed. Matching ignored capitalisation, except for the acronyms.

responsible AI · AI governance · AI risk · artificial intelligence risk · model risk · model validation · AI policy / principles / framework · AI ethics · FEAT · Veritas · fairness · explainability · human oversight / human-in-the-loop · algorithm · ISO/IEC 42001 · NIST AI RMF · MAS AI guidelines (AIRM)

Result. None of the 17 terms appears anywhere in the report.

What this search cannot show

- Only the annual report was searched. The sustainability report, the company website, results materials and regulatory filings were not.
- The search looks for exact terms. A framework described in other words would not be found.
- Frameworks set by OCBC at group level may apply to Great Eastern; they were not reviewed.
- Text taken from a PDF can split a phrase across columns, so a term could be missed. The governance and risk sections have not yet been read in full by a second reviewer.

SECTION 6

Hypotheses and how an assessment would test them

Three testable hypotheses would turn this outside-in view into decisions

The public record shows where AI is in use, but not what it is worth or how it is governed. Each hypothesis below is stated so that it can be shown to be wrong. For each, we set out how the assessment would test it and what result would reject it.

	HYPOTHESIS	HOW THE ASSESSMENT WOULD TEST IT	WHAT WOULD REJECT IT
Value	Medical-claims AI can improve accident and health claims 2–5% in 18 months Starting evidence: Annual Report 2025, pp. 12 and 41; Annual Report 2025, Note 30, pp. 186 and 187	Measure leakage, fraud and adjudication outcomes on accident and health claims before and after the claims AI, and size them against the scenario 4 sensitivity.	Measured improvement attributable to AI below 2% of accident and health claims, or not reachable within 18 months.
Governance	Most MAS AI expectations can reuse OCBC group frameworks Starting evidence: Annual Report 2025, pp. 12 and 65	Map Great Eastern's AI uses to a risk-tiered inventory and test each MAS expectation against the controls OCBC group frameworks already provide.	Most expectations need controls that group frameworks do not provide.
Scale	Production criteria, not model accuracy, hold back complex underwriting AI Starting evidence: Annual Report 2025, p. 12	Review the complex-underwriting AI's test evidence, the criteria for production and who decides, in interviews with underwriting, risk and Data & AI leads.	The model has not yet met its accuracy target, while production criteria and decision rights are already defined.

Questions we would put to management

1. How are the reported 75% figures measured: baseline, period and population; which are outcomes and which aims? (Annual Report 2025, pp. 12 and 38)
2. What evidence would move the underwriting AI from testing to production, and who approves it? (Annual Report 2025, p. 12)
3. Where is the framework behind Great Eastern's AI governance statements documented, and who owns it? (Annual Report 2025, pp. 12 and 38)
4. Which AI risk policies does Great Eastern set itself, and which does it adopt from OCBC group? (Annual Report 2025, p. 65)
5. What changed in the 2025 Data & AI operating-model restructure, and where does AI risk ownership sit? (Annual Report 2025, p. 39)
6. Has a successor for the Group Data and AI seat been named since the report, with the same scope? (Annual Report 2025, p. 65)

How the assessment would run

A six-week assessment would test these hypotheses with the leadership team.

Outputs. Sized AI value pools; AI inventory and risk tiers; production path for next use cases.

Proposed next step: a 45-minute working session with the Group CEO, COO, CRO and Data & AI lead.

APPENDIX A

Sources

Documents relied on in this report

DOCUMENT	PAGES CITED
Great Eastern Holdings Limited, Annual Report 2025 Great Eastern Holdings Limited, published March 2026. 244 pages; page numbers printed on PDF pages 6 to 239. www.greateasternlife.com/content/dam/corp-site/group/gels-au-corpcomms/english-website/annual-report/great-eastern-holdings-limited-ar-2025.pdf	6, 12, 38, 39, 41, 65, 71, 78, 186 and 187

Page numbers are those printed on the pages of the annual report. A page without a printed number would be cited by its position in the PDF file.

APPENDIX B

Method

This report is built so that every statement can be traced to the page it comes from. The steps below apply to every quotation and every summary sentence in it.

1 Statements start from a stored copy of the source

Each statement is drawn from a document we hold a stored copy of. For this report that is Great Eastern's Annual Report 2025, as published in March 2026. We record the page on which each statement appears.

2 Quotations are matched word for word

Every quotation is compared with the text of the stored copy, on the page cited, and is printed only if it matches word for word. Where a quotation is shortened, an ellipsis marks the gap and each remaining part is matched in order.

3 Status uses the company's own wording

Where we say how far a use of AI has progressed, we use the company's verb, such as "deployed", "testing" or "developed". A stated aim is never presented as a result.

4 Figures from tables are read from the stored copy

Figures taken from tables, such as the assumption sensitivities in section 4, are read from the stored copy each time the report is produced and checked against the values we expect; any total is recalculated from them.

5 Our sentences are kept apart from the company's

Summary sentences, observations and hypotheses are ours. Each cites the pages it rests on and is checked against those pages for dropped qualifiers, such as "aims to", before release.

6 Absence is reported as a search, not a finding

Where we say the report does not describe something, we state what we searched for, where, and what the search cannot show (section 5).

7 Independent review before release

Before a report is final, its findings are reviewed by an advisor who did not produce them. This discussion draft has not yet completed that review.

APPENDIX C

Open items

The items below could not be confirmed for this draft. None of them is relied on in the body of the report.

ITEM	WHY IT IS OPEN	HOW IT WILL BE CLOSED
Peer size comparison	Total-asset figures for four peers (AIA Group, Prudential Assurance Company Singapore, Income Insurance and Singlife) could not be checked, because the published files could not be retrieved when we checked.	Retrieve the regulator's insurer returns and the peers' annual reports, then check each figure.
Regulatory developments	Regulatory guidance on AI risk management issued after March 2026 has not yet been checked against a stored copy and is not covered in this edition.	Store the regulator's documents and check them before discussion.
Current data and AI leadership	The annual report says a successor to the Managing Director, Group Data and Artificial Intelligence, will be named in due course. We have not located an announcement since.	Confirm with management, or from the company's management-team page.
Developments since March 2026	Half-year results, annual general meeting materials and board announcements published since the annual report have not yet been checked against stored copies.	Store each document and re-read the passages concerned.
Copy of the annual report	The copy of the annual report used was supplied as a file. It has not yet been matched against the copy on Great Eastern's website. Every quotation in this report has been matched against the supplied copy.	Compare the supplied file with the publisher's copy; any difference will be reported.
Baselines and value of outcomes	The annual report gives no baseline or financial value for either reported 75% figure.	Request from management (section 6).
Earlier-year comparison	The FY2024 annual report and the FY2025 results release are not yet in the evidence base, so the report makes no year-on-year statement about AI.	Store both documents and extend the review.
Hiring, patents and spend	Job-posting history, patent filings and a structured extract of the financial statements have not yet been collected. The report therefore makes no statement about AI hiring, patents or technology spend.	Collect in the first phase of the assessment.
Independent review	The summary sentences and observations have not yet completed independent review.	Complete before the report is issued as final.
