GREAT EASTERN HOLDINGS

Scaling AI at Great Eastern: from proven use cases to measurable value

Perspectives for discussion with the leadership team · October 2026

PLUMB ADVISORY

Great Eastern already runs AI in advice, claims and compliance; the next gains depend on proving value and evidencing AI governance

1

AI is in use from advice to claims and compliance

Great Eastern has deployed an AI-enabled advisory platform for its financial advisers, rolled out a proprietary platform that automates medical claims, and uses AI to monitor transactions and sales for compliance risk.

2

Reported outcomes are speed and effort, not yet dollars

In 2025, 75% of medical claims were turned around the same day, and the advisory platform aims to cut adviser preparation time by about 75%; neither is reported with a baseline or a financial value.

3

Board oversight of AI exists; how AI itself is governed is not yet described

Two named directors are to receive fees for their work on data and AI initiatives, while the governance the report cites alongside AI is a service-quality scorecard and the Cyber Trust Mark.

Next Three hypotheses to test together — page 6

WHERE AI IS IN USE

AI is in use from advice to claims and compliance; complex-case underwriting is still in testing

Advice & distribution

IN USE

AI-enabled advisory platform for financial advisers

Underwriting

IN USE

In-house analytics and AI for underwriting

TESTING

AI for complex underwriting cases

Onboarding

IN USE

AI segmentation enabling instant approvals for existing lower-risk Great CareShield customers

Claims

IN USE

Proprietary platform automating medical claims

IN USE MALAYSIA

Medical-bill OCR to detect wastage and abuse; won an industry award

Risk & conduct

IN USE

AI monitoring of transactions and sales for compliance risk

IN USE MALAYSIA

AI model flagging potential misconduct for investigation

IN USE TESTING

REPORTED OUTCOMES

Claims shows the clearest AI result; the adviser platform's benefit is still a target

RESULT · 2025

75%

of medical claims turned around the same day

One of the fastest among Singapore’s health insurers, based on Ministry of Health service indicators

TARGET

~75%

targeted cut in financial advisers’ preparation time

The AI-enabled advisory platform “aims to reduce” preparation time; no achieved figure is reported

So what Neither figure is tied to a baseline or a dollar value — the evidence a board needs to fund the next wave of AI.

Source: Great Eastern Holdings Annual Report 2025, pp. 12, 38

AI oversight reaches the board, but how AI itself is governed is not yet described publicly

What the 2025 report shows

- Two named directors are to receive fees for their contributions to IT infrastructure, data and AI initiatives
- The Board's collective competencies include artificial intelligence and risk management
- AI monitors transactions and sales patterns for compliance risks, including anti-money laundering and misconduct
- The governance cited alongside AI is a Quality Assurance Scorecard and the Cyber Trust Mark

Not yet described publicly

- ◯ AI policy or responsible-AI principles
- ◯ An inventory of AI systems and their risk materiality
- ◯ Model risk management extended to AI

Annual reports rarely describe AI governance in detail; this reflects public disclosure, not an assessment of practice. Frameworks set at OCBC group level were not reviewed.

HYPOTHESES TO TEST TOGETHER

Three hypotheses would turn this outside-in view into decisions

		HYPOTHESIS TO TEST	HOW THE ASSESSMENT WOULD ANSWER IT
1	VALUE	Which three AI use cases would move Great Eastern's claims and expense ratios most in 2027, and what are they worth?	Size each candidate against Great Eastern's own claims and expense lines, then rank by value and feasibility
2	GOVERNANCE	What would board-ready evidence of AI risk management look like, and how much can build on OCBC group frameworks?	Map today's AI systems to a risk-tiered inventory and show which controls group frameworks already cover
3	SCALE	What evidence would move complex-case underwriting AI into production, and what would it be worth?	Define production criteria, test evidence and decision rights, and size the underwriting benefit

Source: Great Eastern Holdings Annual Report 2025, pp. 12, 38

PROPOSED NEXT STEP

A 12-day assessment would test these hypotheses with your leadership team

Value

AI value pools sized from Great Eastern's own numbers, with the three use cases worth funding first

Governance

An AI inventory and risk-tier view that a board and regulator can rely on, built to reuse group frameworks

Scale

Production criteria and decision rights for the next use cases, starting with complex-case underwriting

Days 1–3
Public evidence and peer comparison

Days 4–9
Leadership questionnaire and 10–12 interviews

Days 10–12
Synthesis and leadership read-out

Proposed: a 45-minute working session with the Group CEO, COO, CRO and Data & AI lead in ***‹to confirm: week›***. Fixed fee ***‹to confirm: S$ amount›***. No confidential data is needed for this phase.
